

ATSC Information Quality Expert Presents at MIT Symposium

MCLEAN, VA – July 11, 2011, ATS Corporation (“ATSC” or the “Company”) (NYSE Amex: ATSC), a leading information technology company that delivers innovative technology solutions to government and commercial organizations, today announced that Mark Amspoker, ATSC Senior Business Systems Analyst, will present a tutorial on “Application of the Federal Data Quality Framework and the Federal Enterprise Architecture (“FEA”) Reference Models” at the *MIT Information Quality Industry Symposium* to be held on July 13, 2011 in Boston, Massachusetts.

The tutorial is being offered to acquaint business leaders with proven strategies for integrating information quality (“IQ”) into their existing architecture and engineering programs. “Federal agencies and Communities of Interest often have a number of data quality disciplines at their disposal, but rarely will they implement all disciplines at once because improving data quality is a process and not an event,” says Mr. Amspoker.

Under the auspices of the CIO Council’s Data Architecture Subcommittee, Mr. Amspoker was the principal author of The Federal Data Quality Framework. The Framework, designed to provide guidance for consistent understanding and practices of data quality across government agencies, has become a widely recognized best practices document among IQ practitioners in the Federal government. As part of the tutorial, Mr. Amspoker will provide an overview of the Framework and how it is being used by agencies.

Points of emphasis in the tutorial will also include:

- Communicating the business value for data quality
- Using Federal Enterprise Architecture objectives to systematically improve data quality
- 13 powerful processes to improve agency data and information
- Success stories at a number of Federal agencies

The *MIT Information Quality Industry Symposium* is a premier forum on IQ among practitioners, vendors, and academicians. The symposium is industry practice oriented and includes workshops, paper and report tracks, and sessions and space for announcing, presenting and discussing vendors’ products and consultancy methods.
